Resource Heterogeneity Structures Microbial Communities

Mario E. Muscarella 28 January, 2016

Introduction

Much is already know about how spatial gradients in resource availability contribution to the structure and fucntion of microbial communities. However, we are begining to appreciate the molecular diversity within the resource pool. In this study, we explore how both the concentration and diversity of resources contribute to the structure and function of aquatic microbial communities.

We sampled 10 lakes in the Huron Mountains of Michigan. The Huron Mountains are located in the Superior Bedrock Uplands region of the Michigan Upper Peninsula (Schaetzl et al 2013). The region is classified as The forests around the lakes are The wetershed is

Phylogenetic Approach

Resource distirubiton is not able to explain the distribution of all organisms combined. But why should we expect this assumption?

Remove Cyanobacteria

Microbial Functional Groups

Define RDP microbial groups Test each along with resource differences Who are the generalist taxa (which are active everywhere) Are generalists more abundant when resource concentration is higher?

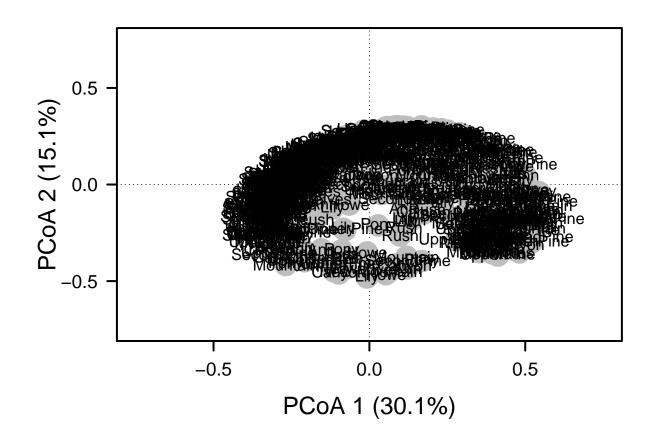

Can we group resources

What are the similar groups of resources: cluster resources based on abundance Can we cluster based on chemical data?
